Erasmus+

International Youth Exchange

Learning to code Changing the world

Erasmus+
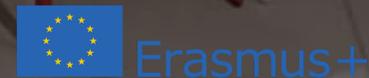

Some information about us....

The cultural association and coder dojo "Altera Logos" was born in 2019 with the aim of bringing young people closer to an active, aware and responsible use of technologies. The association in line with the principles of Erasmus proposes the following project "Learning to code - Changing the world

ALTERA LOGOS
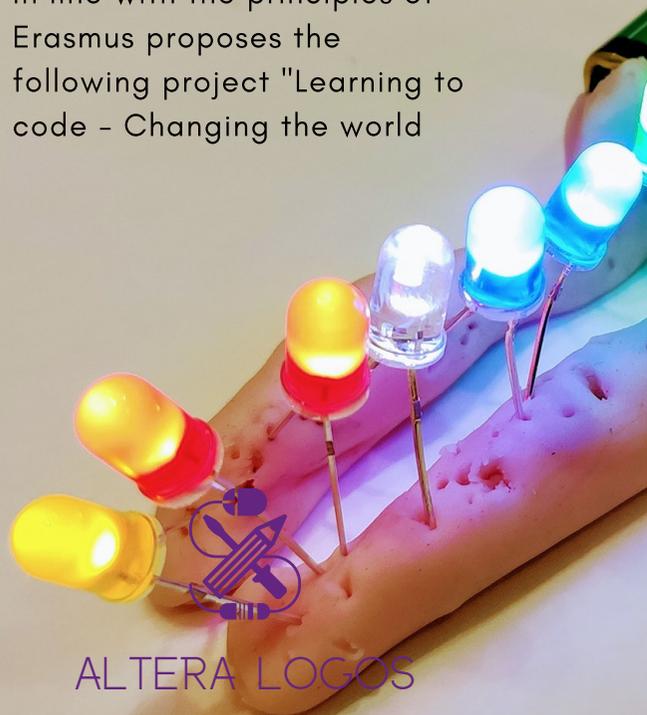

Methodology

First of all we want to clarify **this is not a coding course**. All the activities of the project are modulated to favor and facilitate the exchange between differentcultural realities, thus favoring and improving the skills of the participants through the sharing of good practices at an international level. In addition to the playful aspects, of personal and interpersonal knowledge, we will inform and prepare young people for a conscious use and a no longer passive use of technology through the use of coding programs taking into account their interests and values. We believe that increasing the skills of young people on technology and digital are key factors for accessing the job market.

Aims

- To inform young people about the opportunities offered by the Erasmus + program
- Achieve a conscious use and a no longer passive use of technology
- To increase one's abilities in terms of both autonomy and competence as well as collaboration and mutual tolerance.
- Acquire greater self-esteem in such a way as to believe more in themselves, which will greatly facilitate them in learning to define their future goals and define themselves with respect to others.
